Projects:

Mobile Attendance

Complete *offline mobile attendance solution* for *Salesforce* cloud platform. Allows user to capture attendance offline on android 4+ devices even without internet connectivity and sync offline data with salesforce cloud whenever connectivity is restored.

Responsibilities:

Played the role of a *Responsible Contact* for the project. To provide guidelines and expertise on technologies, primarily on mobile and SFDC. Oversee the development process and build QA around the mobile and SFDC application.

Adoption:

The application is adopted by organizations like *Stir* and being used by more than 100+ session conductors to capture data of more than 10,000 students.

SMS Gateway

A real-time highly redundant cloud application that empowers organization to use *Sms* as a means of communication with customers. This application builds a seamless integration between *SFDC* and *Telerivet* that allows for a two way automated sms communication.

Responsibilities: Be the single point of contact for the complete UI design and development plus establishing a bench mark for performance and stress testing to comply with heavy sms traffic. Version control and new releases.

Adoption: Used by *MyAgro*, a company that envisions moving a million small-scale farmers beyond subsistence farming and out of poverty. This app to allows affiliated famers use sms to add money to their account using recharge cards using sms as the means of account management and consumer interaction. A customized version is deployed for *CB-BAM*.

TimeLine

A highly customizable *SFDC* app that pulls data from user selected objects and automatically builds a timeline using the data within.

Responsibilities:

System and UI design. Conceptualizing, designing and developing the entire app flow that allows users to select custom/standard objects and set various reporting and data filter parameters of the timeline chart that allows for specific and/or generalized reporting. System and unit testing.

Adoption:

The application is deployed and used by various non-profit organizations like *Samdana and TGF* to name a few and has found wide internal adoption within Vera Solutions due to its flexibility and customization option.

Tugende

An organization that creates opportunity through ownership by kick-starting financial independence for Ugandan motorcycle taxi drivers. Building a lease management system that integrates with a payment gateway provider (*Musoni*) to track transactions in near real-time.

Responsibilities:

Develop a *Push* and *Pull* based *JSON* integration with *Musoni* a microfinance management platform using *SFDC REST API*.

Adoption:

The system is the primary lease management & client management system for *Tugende*.

Salesforce development

Worked on a number of projects with varied development responsibilities, from developing Apex triggers, VisualForce pages, API integrations, test classes, using *Google Charts* to build a baseline reporting system according to WHO standards and numerous other tasks. Clients include *Pollinate, UAP, FMCH, MyAgro, BlueEngine*.

Web development

- Designed and developed a complete online presence suite for
-Aarian Inc. -Auxin management -Shehz-n-shades
